

Carlos Ferreira, M.D.

National Human Genome Research Institute (NHGRI),
USA

Carlos Ferreira, M.D. is a native of Paraguay.

He went to medical school at the National University of Asunción, completed an Internal Medicine residency at Rush University Medical Center in Chicago, Illinois, residency in Clinical Genetics at the National Human Genome Research Institute (NHGRI) and Johns Hopkins Hospital Medical Genetics Consortium in Maryland, and a fellowship in medical biochemical genetics at NHGRI.

He then worked for three years doing research and performing clinical duties both at the National Institutes of Health and at Children's National Medical Center; during that time, he was the Principal Investigator for the Natural History protocol on CDGs.

Currently, he is a participant of the Physician Scientist Development Program at NHGRI, a pre-tenure track position.

His main areas of interest include inborn errors of metabolism, and skeletal dysplasias.
