

Dr Ethan Perlstein

Perlara, San Francisco, California, USA

Dr. Perlstein is the CEO of Perlara biotech company based in the Bay Area.

Over the course of the last decade, first as a graduate student at Harvard University in the Department of Molecular and Cell Biology with PhD advisor Professor Stuart Schreiber and then as an independent postdoctoral fellow at the Lewis-Sigler Institute at Princeton University, Dr. Ethan Perlstein developed an approach to studying old drugs and discovering new drugs in model organisms called evolutionary pharmacology.

Ethan is an author on 19 peer-reviewed scholarly publications, including the discovery of a novel mechanism of action for the antidepressant Zoloft based on studies in yeast cells.
